SITUATIONAL ORDER FLOW

"Why be a sheep in the markets when you can be a wolf and track order flow?"

Module 2 – Signs The Market Is About To Shift Based On Order Flow.

Situational Order Flow

Disclaimer

This course is for educational and informational purposes only and should not be considered a solicitation to buy or sell a futures contract or make any other type of investment decision. Futures trading contains substantial risk and is not for every investor. An investor could potentially lose all or more than the initial investment. Risk capital is money that can be lost without jeopardizing one's financial security or lifestyle. Only risk capital should be used for trading and only those with sufficient risk capital should consider trading. Past performance is not necessarily indicative of future results.

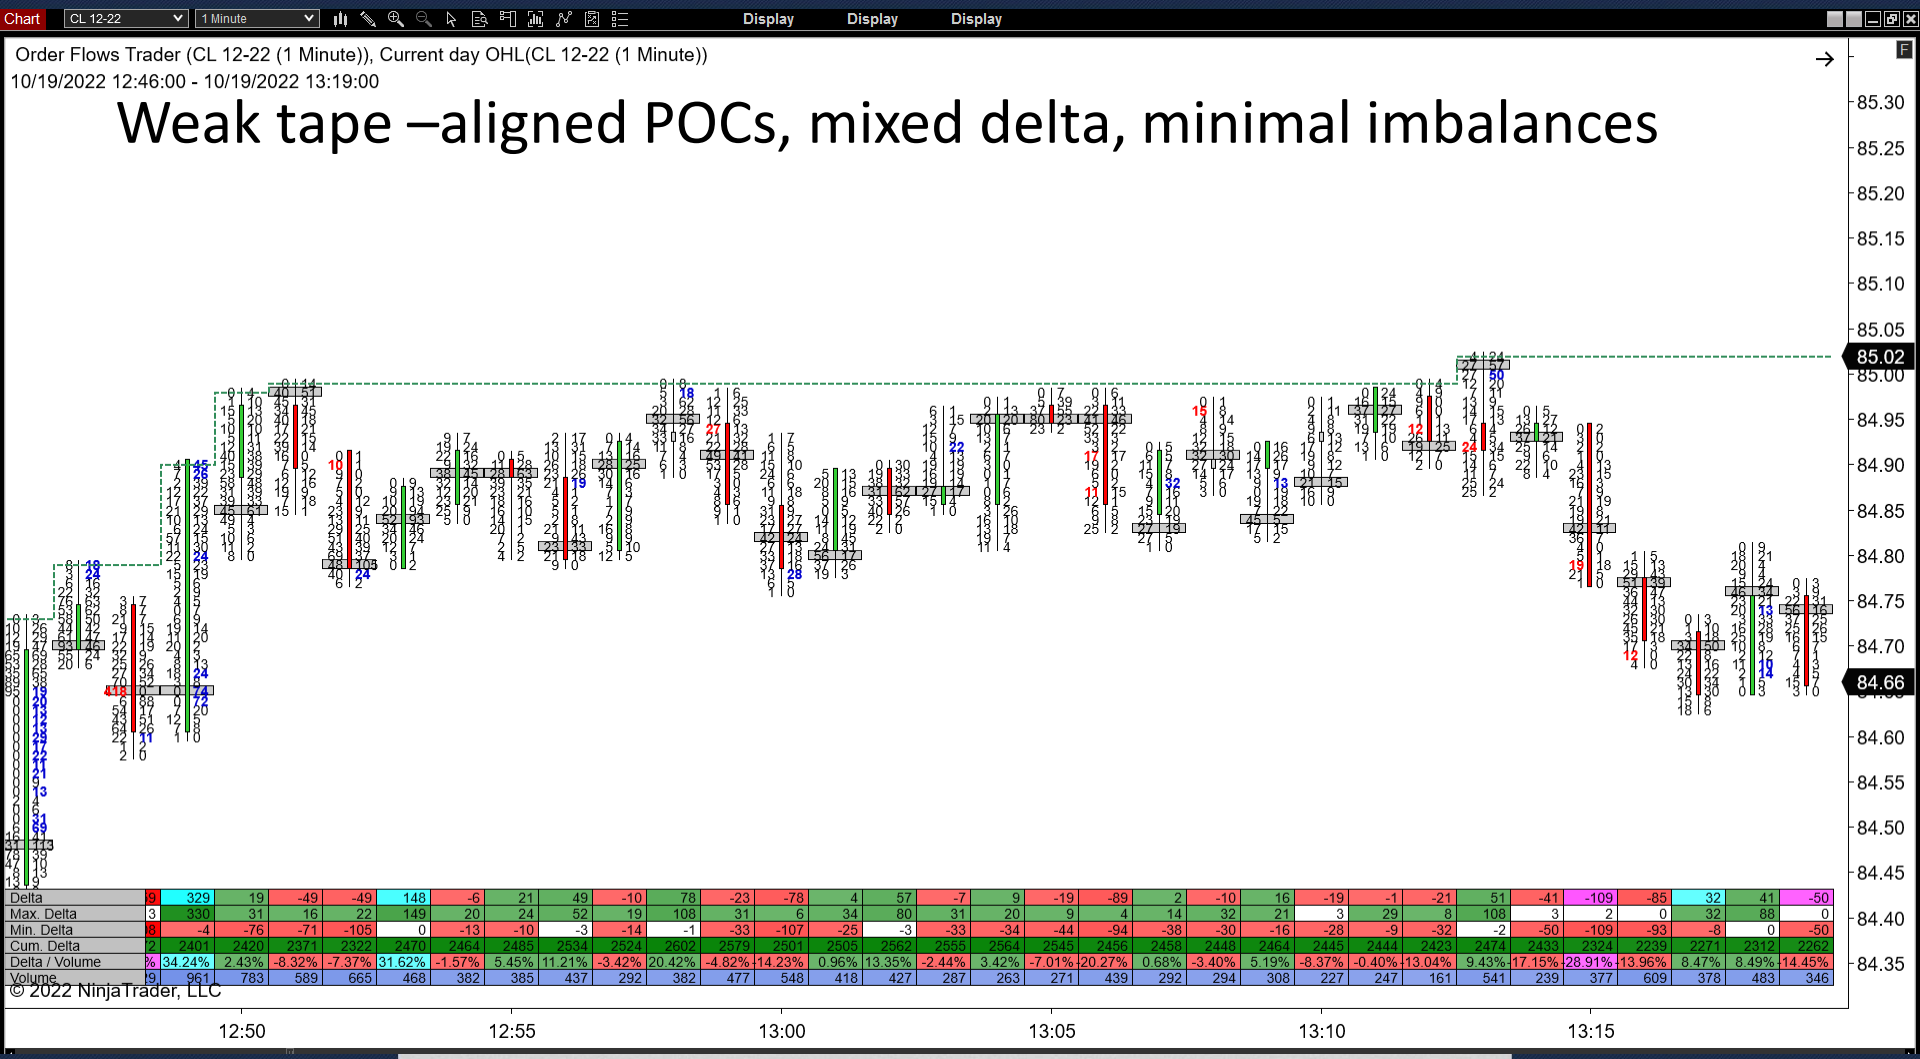

CFTC Rules 4.41 - Hypothetical or Simulated performance results have certain limitations, unlike an actual performance record, simulated results do not represent actual trading. Also, since the trades have not been executed, the results may have under-or-over compensated for the impact, if any, of certain market factors, such as lack of liquidity. Simulated trading programs in general are also subject to the fact that they are designed with the benefit of hindsight. No representation is being made that any account will or is likely to achieve profit or losses similar to those shown.

Situational Order Flow

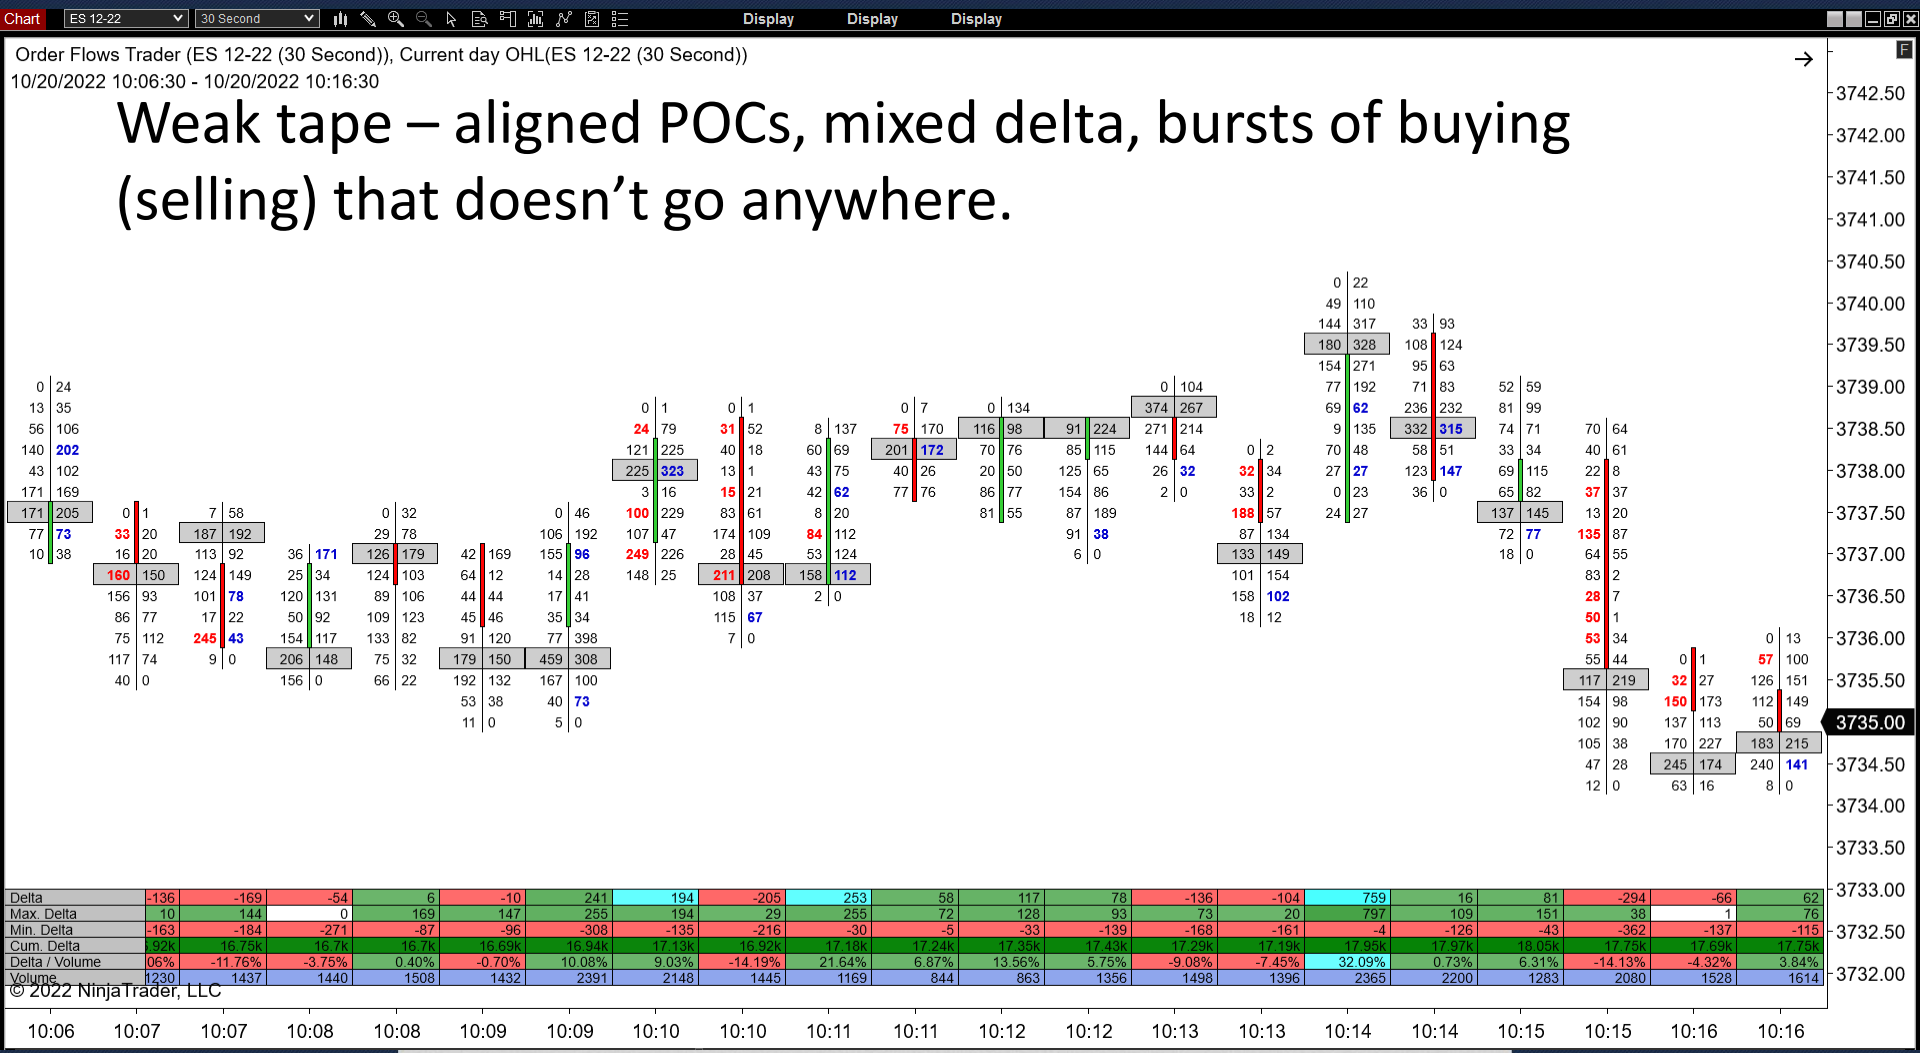

Module 2 – Signs The Market Is About To Shift Based On Order Flow.

When a market is exhibiting strength in a weak tape, it is important to pay attention. This can be an indication that the market is about to turn and head in the opposite direction. As such, it is crucial to be aware of this signal and take appropriate action. One way to do this is to monitor the market's momentum. If the market is displaying strength, but the momentum is waning, this could be a sign that the market is about to turn. Another thing to look for is large volume spikes. If there is sudden and heavy selling pressure, this could be an indication that the market is about to reverse. Paying attention to these signals can help you avoid getting caught in a losing position.

Module 2 – Signs The Market Is About To Shift Based On Order Flow.

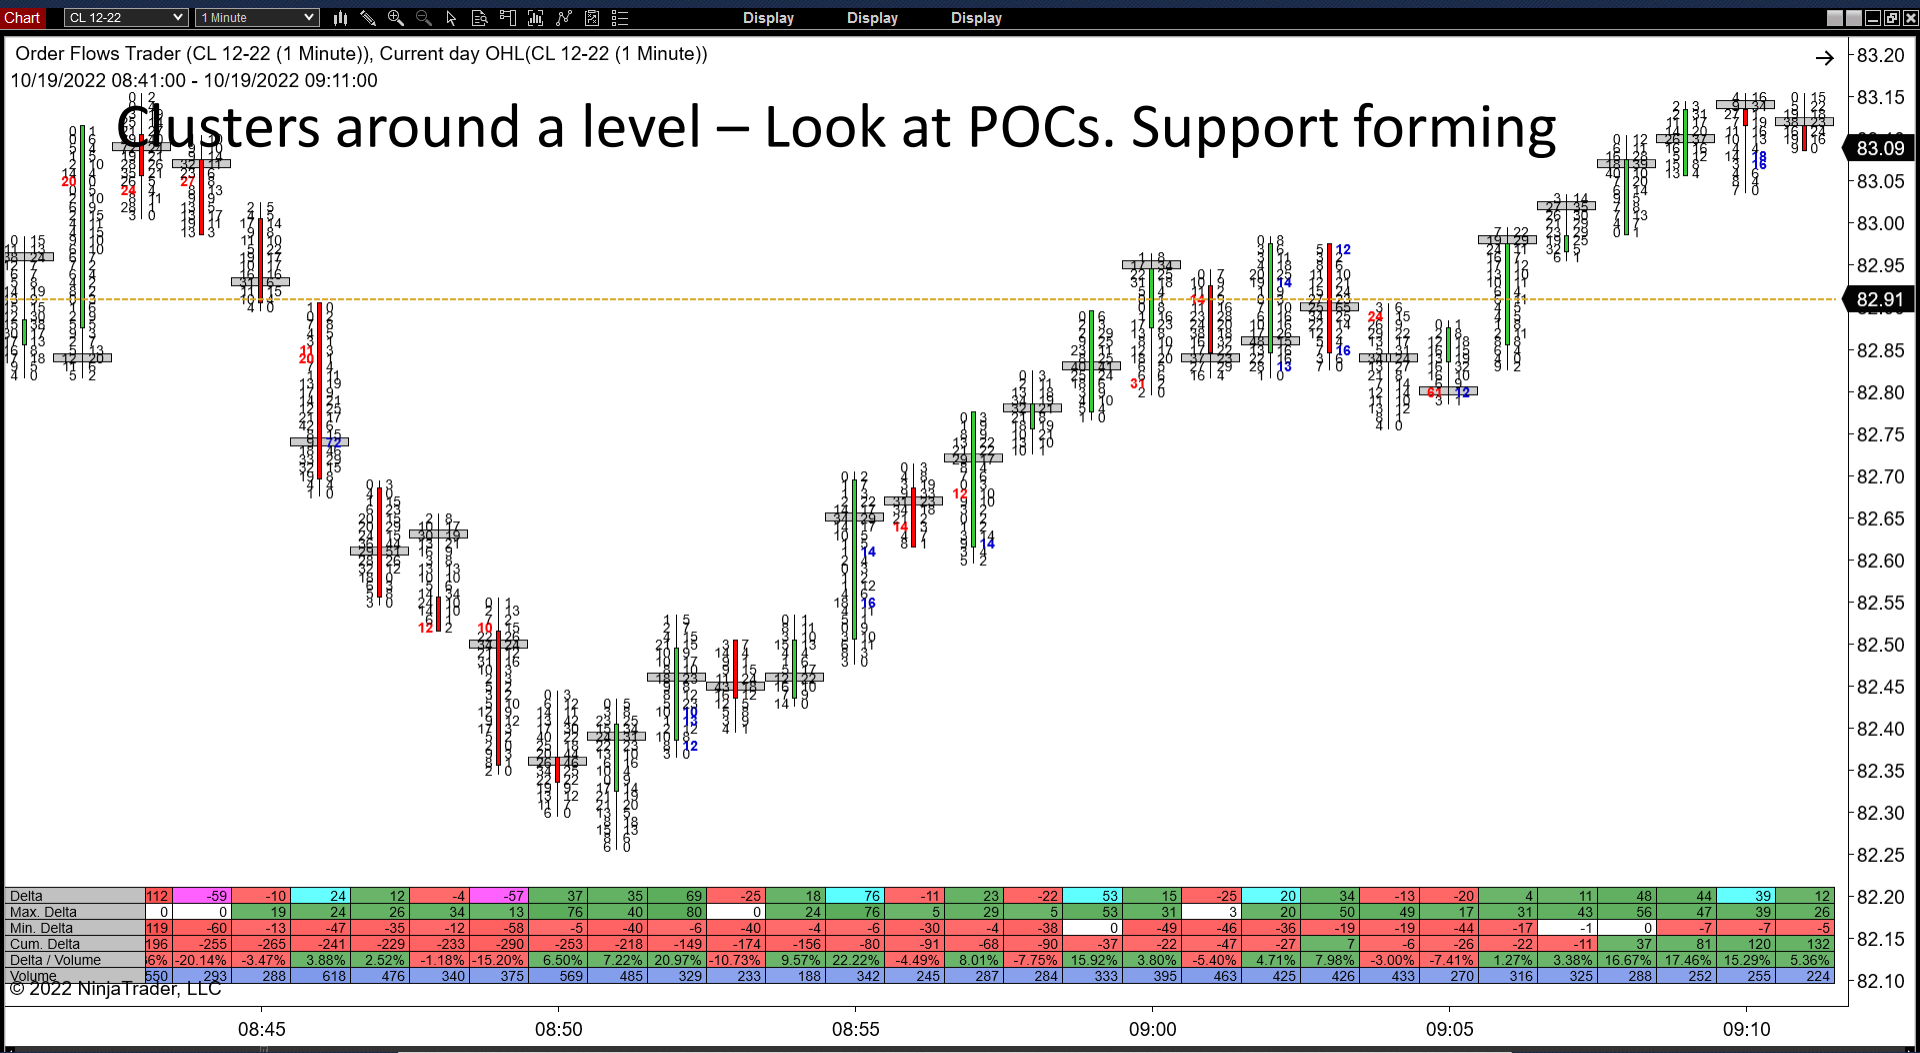

A way to spot potential reversals is to look for clusters of orders around key levels. If there's a sudden influx of buy orders around a support level, for example, that could be a sign that prices are about to rebound off that level. Similarly, if there's a sudden influx of sell orders around a resistance level, that could be a sign that prices are about to roll over and head lower.

Situational Order Flow

Situational Order Flow

Module 2 – Signs The Market Is About To Shift Based On Order Flow.

When it comes to trend trading, one of the most important things to remember is that the base is your friend. You want to stay close to the base, and trade around it. The reason for this is that the base represents the point at which buyers and sellers are most evenly matched. As the market starts to move in one direction or the other, there will be more buyers than sellers, or more sellers than buyers. But at the base, they are balanced. That's why it's so important to stay close to the base - because that's where you're most likely to find support or resistance. So next time you are trend trading, remember to keep your friend close by - the base - and trade around it.

Module 2 – Signs The Market Is About To Shift Based On Order Flow.

If you are trend trading, then the base is your friend. When prices are in a downtrend, the lows form the base. When prices are in an uptrend, the highs form the base. The key to trend trading is to get in close to the base. As prices move up and down, they will often retrace back to the base. This provides an opportunity to enter a trade around the base. The stop loss can be placed just below the lows (in a uptrend) or just above the highs (in a downtrend). The trade can then be held until either the price breaks out of the range or the price reverses and starts to head back in the opposite direction. By staying close to the base, you can make sure that you are always in a position to take advantage of any move in prices.

Module 2 – Signs The Market Is About To Shift Based On Order Flow.

So, let's talk about the signs of a market about to shift. This is where Price Action and Order Flow differ. Price Action will only show you after a market makes its shift. If price has been going down and suddenly starts to go up, then the shift has already taken place. Order flow gives clues that a market move is slowing down which can lead to sideways action then a reversal or just straight to a reversal.

Module 2 – Signs The Market Is About To Shift Based On Order Flow.

You have heard the saying "the trend is your friend." And while that's certainly good advice, it's not the whole story. You see, trends don't just happen randomly - they are driven by real money flows. Professional traders refer to this as "order flow," and it's the bread and butter of their success. While most retail investors focus on guessing the next move of the market, smart traders focus on following the money. By understanding how and why large orders are being traded, you can get a clear picture of where the market is headed next.
