Disclaimer

This course is for educational and informational purposes only and should not be considered a solicitation to buy or sell a futures contract or make any other type of investment decision. Futures trading contains substantial risk and is not for every investor. An investor could potentially lose all or more than the initial investment. Risk capital is money that can be lost without jeopardizing one's financial security or lifestyle. Only risk capital should be used for trading and only those with sufficient risk capital should consider trading. Past performance is not necessarily indicative of future results.

CFTC Rules 4.41 - Hypothetical or Simulated performance results have certain limitations, unlike an actual performance record, simulated results do not represent actual trading. Also, since the trades have not been executed, the results may have under-or-over compensated for the impact, if any, of certain market factors, such as lack of liquidity. Simulated trading programs in general are also subject to the fact that they are designed with the benefit of hindsight. No representation is being made that any account will or is likely to achieve profit or losses similar to those shown.

Module 3 – Order Flow Price Patterns That Can Help You Catch The Next Big Move.

The most important thing to remember as a trader is that the market doesn't care what you think. Your predictions and forecasts are completely irrelevant. What matters is the order flow - how is the buying and selling transacting. If you can understand the reasons behind the market's moves, you'll be far better equipped to make money than if you're simply guessing at where prices are going. And if you don't have a deep understanding of the market, your chances of being right are slim. So instead of trying to predict the future, focus on understanding the present.
