SITUATIONAL ORDER FLOW

"Why be a sheep in the markets when you can be a wolf and track order flow?"

Module 7 – Situational Order Flow Setups.

Situational Order Flow

Disclaimer

This course is for educational and informational purposes only and should not be considered a solicitation to buy or sell a futures contract or make any other type of investment decision. Futures trading contains substantial risk and is not for every investor. An investor could potentially lose all or more than the initial investment. Risk capital is money that can be lost without jeopardizing one's financial security or lifestyle. Only risk capital should be used for trading and only those with sufficient risk capital should consider trading. Past performance is not necessarily indicative of future results.

CFTC Rules 4.41 - Hypothetical or Simulated performance results have certain limitations, unlike an actual performance record, simulated results do not represent actual trading. Also, since the trades have not been executed, the results may have under-or-over compensated for the impact, if any, of certain market factors, such as lack of liquidity. Simulated trading programs in general are also subject to the fact that they are designed with the benefit of hindsight. No representation is being made that any account will or is likely to achieve profit or losses similar to those shown.

Situational Order Flow

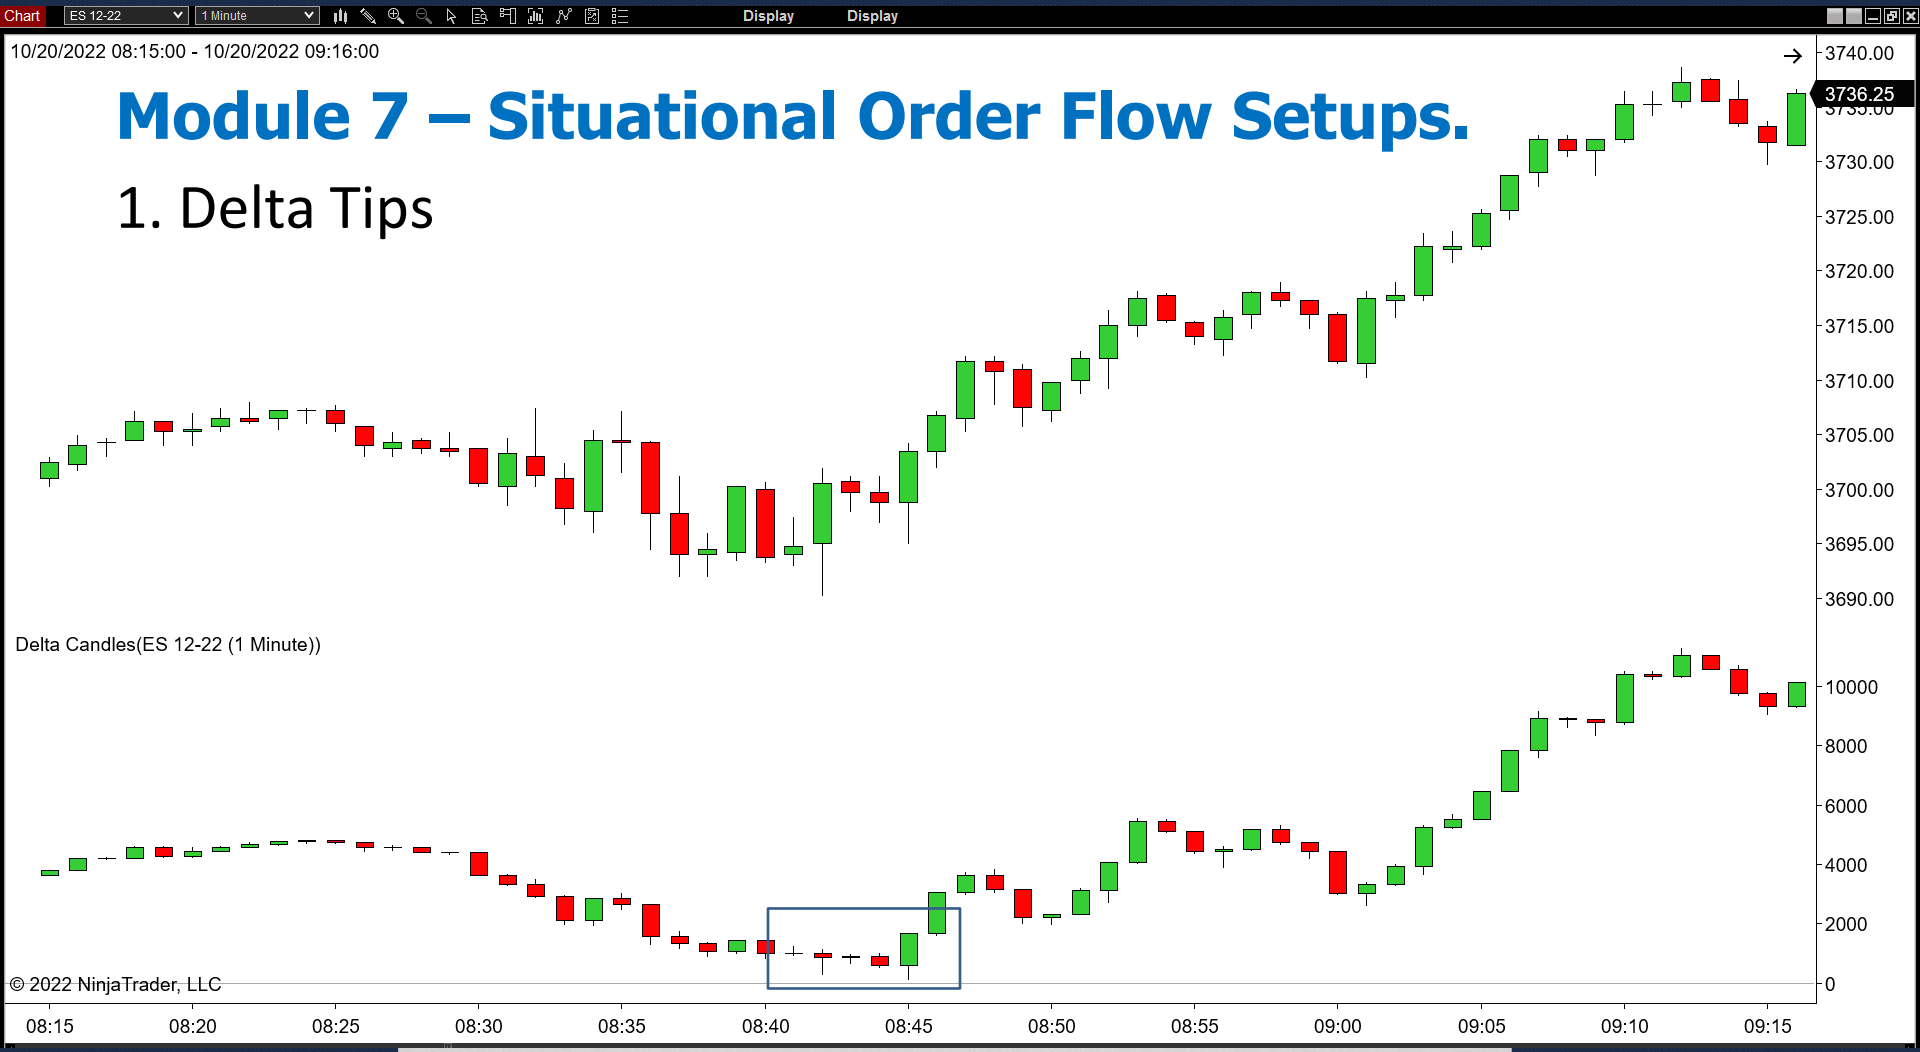

Module 7 – Situational Order Flow Setups.

1. Delta Tips – when cumulative delta starts wicking. Meaning the market is testing lower (higher) and is brought back by aggressive traders. Want the last delta to be in the direction you expect the market to move. If looking for a bullish move, the last delta should be positive. For a bearish move, the last delta should be negative.

Module 7 – Situational Order Flow Setups.

2. Double Top Pops – when the market breaks through a double top (double bottom) and fails. Go in the direction of failure.

This is not new, it comes in many forms of analysis. Some call call it a look above (below). Others refer to it as stop hunts or liquidity grabs.

Module 7 – Situational Order Flow Setups.

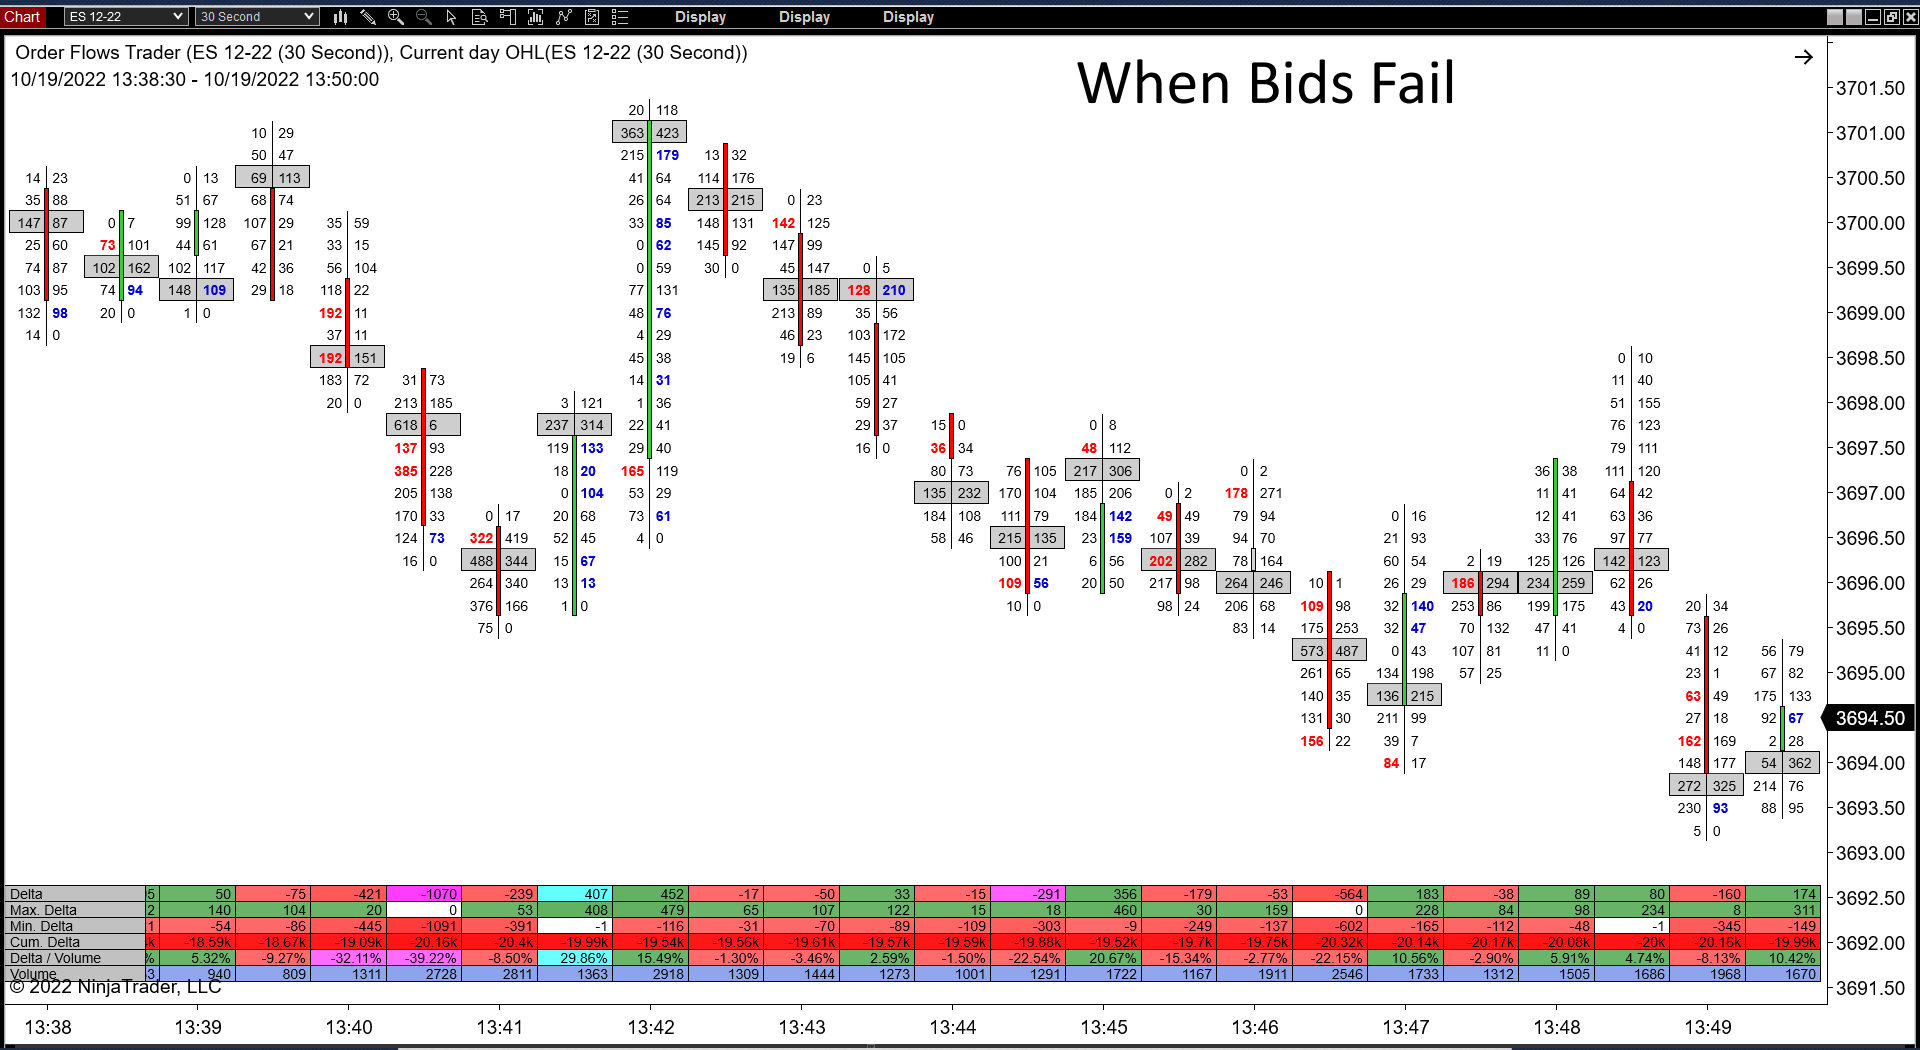

3. When Bids Fail – when strong bids are present and get whacked, look for the market to sell off. The opposite is when strong offers are traded through like they aren't there, look for the market to go higher.

It needs to come in where the market just was trading.

Situational Order Flow

4. Vertical Imbalance – Imbalances between bids or imbalances between offers. Up and down in the bar.

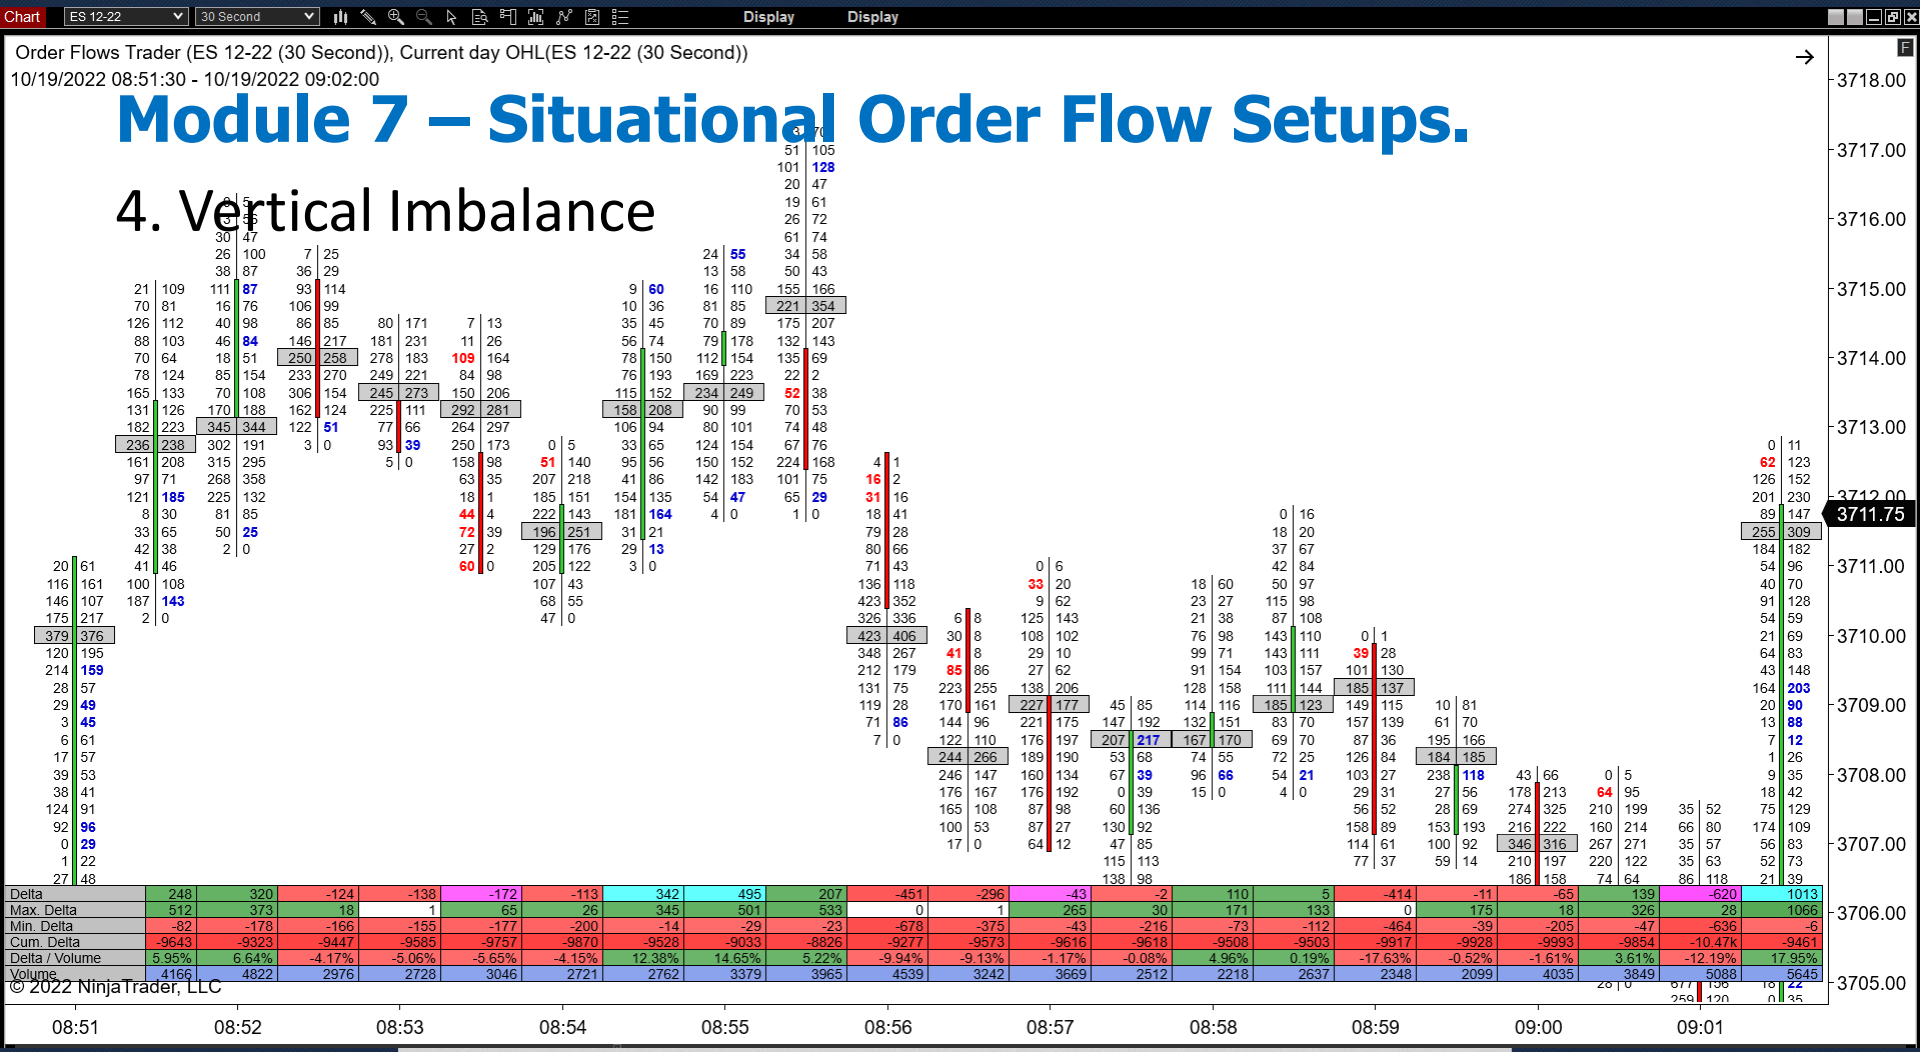

I like 20 to 1. 2000%

Strong momentum.

6. Imbalance Flips

Situational Order Flow

Module 7 – Situational Order Flow Setups.

7. Suckering Them In – when you see abnormally large or heavy volume coming in at swing highs/lows.

The volume is attracting traders, then the rug pull happens.

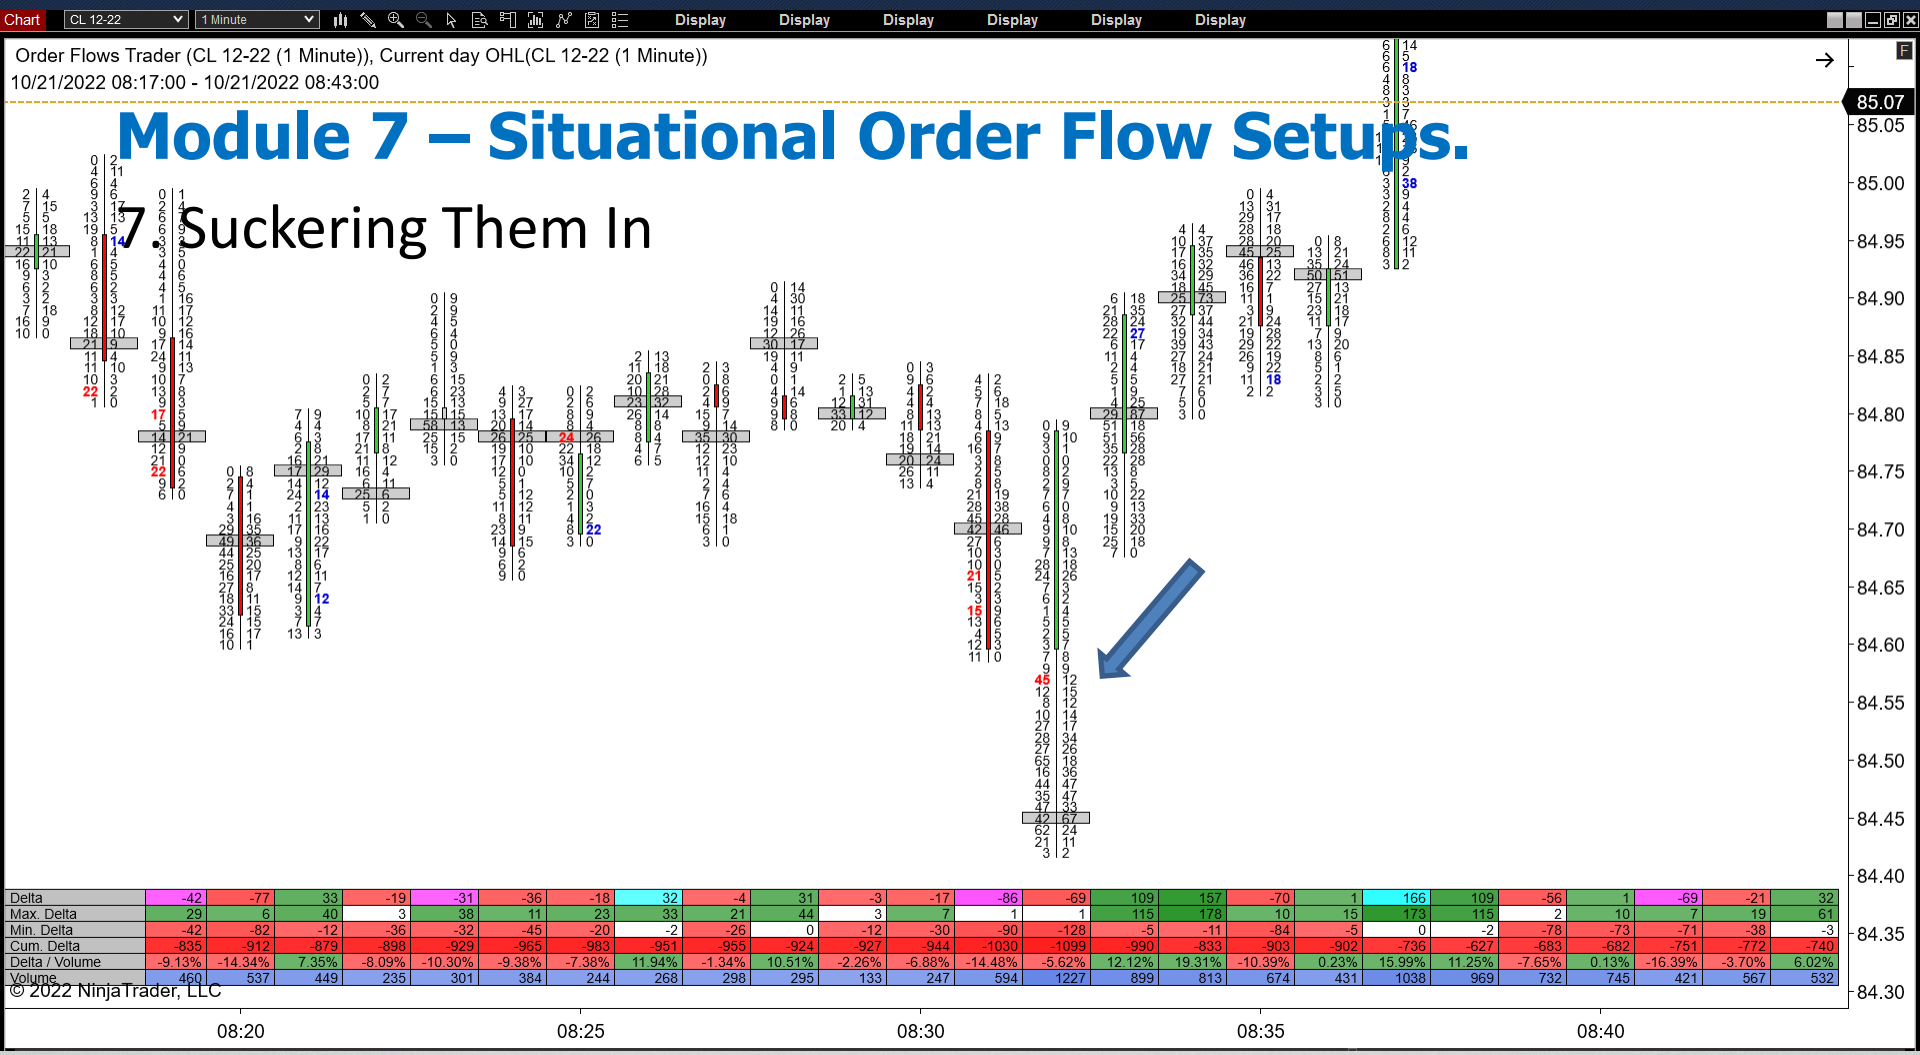

Situational Order Flow

Module 7 – Situational Order Flow Setups.

It is important to have specific trade setups that you are looking for in the market. This allows you to be more focused when you are trading and to have a plan for what you are looking for. There are many different trade setups that you can look for, and it is important to find the ones that work best for you.
